

Risk of Fall Stars Improvement Program

Customized Care is just a Phone Call Away- Go above and beyond the average CMR for your patients that are at risk of falling. Let us help you support them.

Program Overview

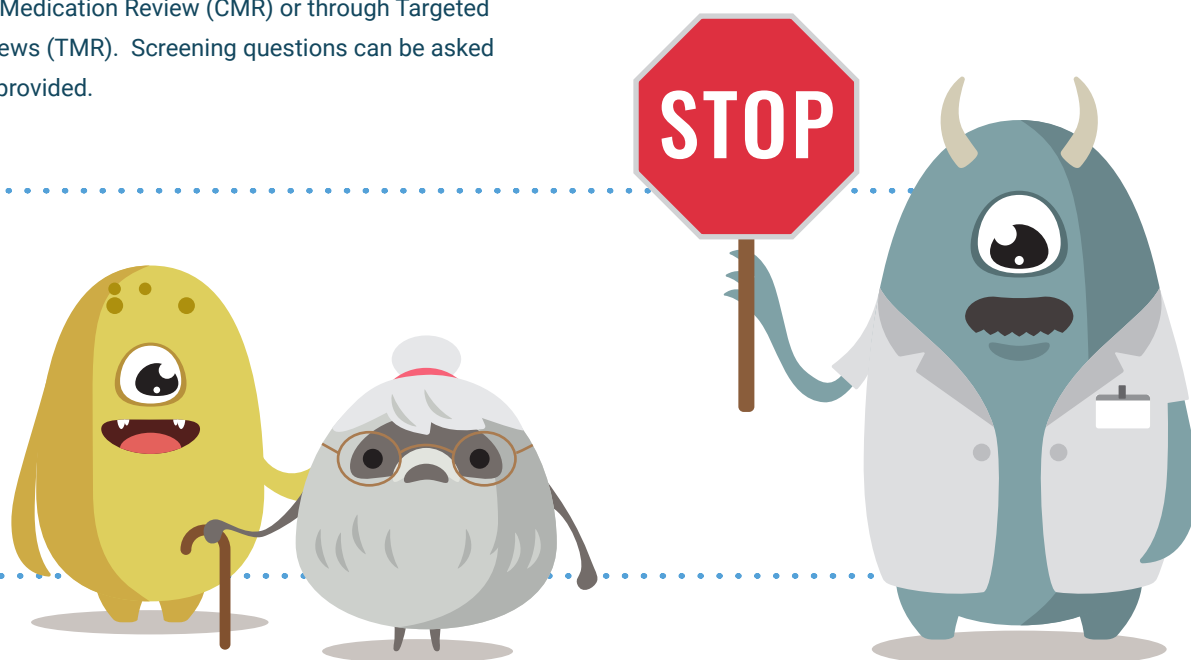

Health plans are being evaluated based on the percentage of Medicare members 65 years of age and older who had a fall or had problems with balance or walking in the past 12 months, who were seen by a practitioner in the past 12 months (denominator) and who received a recommendation for how to prevent falls or treat problems with balance or walking from their current practitioner (numerator).

Why myMTMcare?

- Our personalized approach to remote care and outreach can assist you in reaching your patients. Our clinical pharmacists are trained to identify patients at risk of increased fall due to their medication regimen, drug/drug interactions, and drug/disease interactions.
- Our pharmacists can identify at risk patients either during a Comprehensive Medication Review (CMR) or through Targeted Medication Reviews (TMR). Screening questions can be asked and counseling provided.

We have your back!

Our Risk of Fall SIP includes bi-annual one-on-one calls for your members with a specially trained myMTMcare pharmacist. During the call our pharmacist will have a thorough conversation with the patient to go over any possible warning signs, and prevention measures patients can be taking.
